SENTRY IQ · 2-MINUTE PITCH DEMO

High-Velocity Live Walkthrough Flow & Word-for-Word Script

TARGET TIME: EXACTLY 2:00 (120 SECONDS) · ~260 WORDS

PRIMARY ASSET: Substation Transformer TX-400
APP HOST: http://localhost:3000
PACING: 130 WPM (Clear, Confident, Crisp)

30-SECOND PRE-FLIGHT CHECK (BEFORE HITTING PLAY)

- ✓ **Display:** Chrome full-screen (F11), 100% zoom
- ✓ **Preset State:** TX-400 selected, simulation at Day 0 (Reset)
- ✓ **Copilot Drawer:** Kept closed until Act 4 trigger

MASTER 120-SECOND FLOW ARCHITECTURE

Act	Screen / Click Target	Core Narrative & Impact Point	Window
Act 1: The Crisis	Vitality Header & Status Pill	$450k transformer failure vs. early dissolved gas signals	0:00 – 0:20 (20s)
Act 2: Digital Twin	100Hz Waveform Telemetry	Real-time DGA telemetry (H_2, Dielectric, Temp) & nominal baselines	0:20 – 0:45 (25s)
Act 3: Anomaly Knee	Simulation Scrub (+5 to Day 38)	Unsupervised 3σ Autoencoder breach; +280% H_2 surge; 18-day RUL	0:45 – 1:15 (30s)
Act 4: AI Copilot	Copilot Drawer ("Action" Chip)	Instant physics diagnosis: cellulose insulation pyrolysis	1:15 – 1:40 (25s)
Act 5: Closed-Loop ROI	Work Orders & Financial Bento	Work Order #WO-XFMR-3902; $428k saved (+95.1% net ROI); Wrap	1:40 – 2:00 (20s)

ACT 1: The $450k Blindspot (The Hook)

0:00 - 0:20 (20s)

UI ACTION Mouse hovers over top KPI banner (Vitality 96%, Telemetry Active). Stand firm, do not click yet.

WORD-FOR-WORD SCRIPT (42 WORDS · ~19 SEC):

"A single 230kV power transformer explosion costs **$450,000** and plunges 45,000 homes into an unscheduled blackout.

Yet transformers don't fail suddenly—they whisper warnings weeks in advance. This is **SENTRY**: an autonomous asset intelligence platform that bridges real-time physics telemetry to closed-loop field operations."

ACT 2: Live 100Hz Telemetry & Digital Twin

0:20 - 0:45 (25s)

UI ACTION Click Fleet Selector briefly to show multi-asset support (Turbofan, Pump, Grid), then keep **Substation Transformer TX-400** active. Gesture to the live SVG waveform channels.

WORD-FOR-WORD SCRIPT (53 WORDS · ~24 SEC):

"Here at Substation Alpha, SENTRY is streaming **continuous 100Hz telemetry**: Top-Oil Temperature, Dissolved H_2 Gas, and Dielectric Breakdown Strength.

Every stream is evaluated against IEEE C57 statistical envelopes. Right now, our Vitality score is **96%**, and the Autoencoder reconstruction error is resting near zero in nominal health."

ACT 3: Stepping into the Anomaly Knee Breach

`0:45 - 1:15 (30s)`

UI ACTION Click **'Step +5'** rapidly 5 times to hit **Day 38**. Stop immediately as the red *'AI Critical Alert: ANOMALY BREACH'* banner fires.

WORD-FOR-WORD SCRIPT (68 WORDS · ~29 SEC):

"Let's simulate operational stress across the next 40 days.

Watch Day 38... **(clicks +5, alert fires)**. Immediately, the unsupervised Autoencoder breaches the **3-sigma threshold**—no manual alarm configuration needed.

Dissolved H_2 has surged **+280%** from 14 to nearly 400 ppm, while dielectric breakdown strength has collapsed. SENTRY dynamically revises Remaining Useful Life down to just **18 operating days** before catastrophic flashover."

ACT 4: Reliability Copilot Root-Cause Diagnosis

`1:15 - 1:40 (25s)`

UI ACTION Click the top-right **'Copilot'** button. When the drawer slides out, immediately click the chip **'Recommended Action'**.

WORD-FOR-WORD SCRIPT (58 WORDS · ~24 SEC):

"Rather than drowning operators in raw alerts, we invoke the **Industrial Reliability Copilot**.

(Click 'Recommended Action')

The Copilot instantly reasons across the telemetry vectors: diagnosing **internal cellulose insulation pyrolysis** and prescribing mobile vacuum dehydration and molecular sieve recharge—saving the core before irreparable tank rupture occurs."

ACT 5: Closed-Loop Dispatch & $428k CFO Proof

`1:40 - 2:00 (20s)`

UI ACTION Point cursor to the **Orders & Financial Impact** bento card. Highlight the **$428,000 Capital Preserved** badge. Look directly at audience for closing line.

WORD-FOR-WORD SCRIPT (52 WORDS · ~20 SEC):

"Finally, SENTRY closes the operational loop: automatically generating **Work Order #WO-XFMR-3902** with the exact tooling kit for Field Crew Beta.

The financial result? A $22,000 scheduled repair versus a $450,000 emergency replacement: **$428,000 in net capital preserved—a 95.1% ROI** on a single asset.

That's SENTRY. Thank you!"

RAPID-FIRE Q&A POCKET DEFENSE (10-SECOND ANSWERS)

Q: What if the PyTorch ML service goes down during operations?

A: Dual-engine architecture: the client immediately and seamlessly fails over to an in-memory calibrated physics simulation in TypeScript with zero dropped telemetry or UI lag.

Q: How does this connect to our existing enterprise work order software?

A: The closed-loop dispatch engine generates standardized REST JSON payloads pre-formatted for direct ingestion into SAP Plant Maintenance (PM), IBM Maximo, or ServiceNow.
